

Управление клиентами ОС ALT

Домен Active Directory / Samba реализует
сквозную аутентификацию на машинах-
клиентах и позволяет доставлять
конфигурацию до машин и пользователей.

The word "samba" is written in a stylized, italicized font. The letters 's', 'a', 'm', and 'b' are black with a yellow outline, while the letters 'a' and 'a' are blue with a yellow outline. A large, black, double-headed arrow is superimposed over the word, pointing both upwards and downwards.

Интегрируемся в домен AD с отечественным СПО GPOA и ADMS

Инструменты

https://www.altlinux.org/Групповые_политики

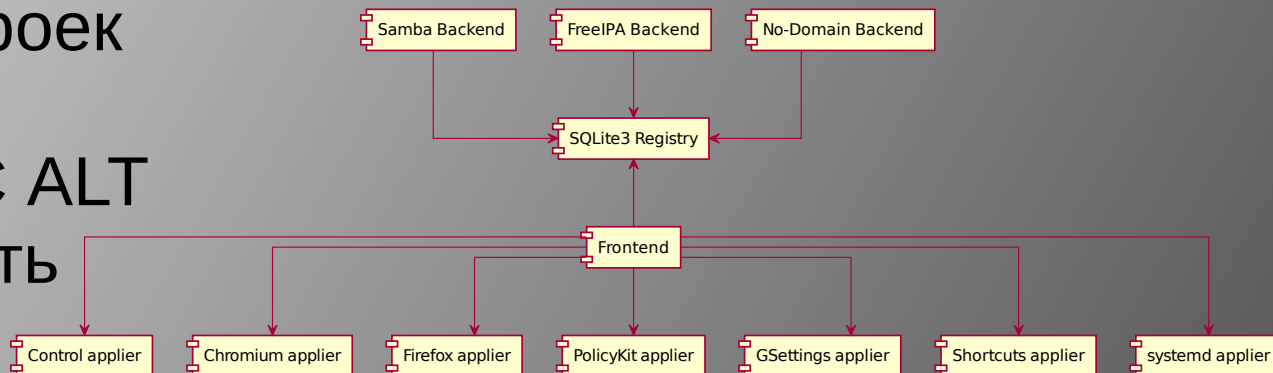

- Строятся поверх Samba
- Интегрированы в ОС ALT
- Свободны
- Сложность спрятана от пользователей

GPOA

<https://github.com/altlinux/gpupdate/>

- Отвечает за вычитывание и применение настроек
- Интегрирован с компонентами ОС ALT
- Имеет возможность подключаться к источникам настроек, отличным от AD

ADMC

<https://github.com/altlinux/admc/>

- Простой графический инструмент для работы с доменом AD/Samba
- Переосмысливает пользовательский опыт работы с RSAT

The screenshot displays the ADMC application interface. On the left, a tree view shows the domain structure, with 'Users' selected. The main pane on the right lists domain users and groups. Below this, the 'sin4 Details' dialog box is open, showing the 'Account' tab. The dialog includes fields for 'Ligon Name' (sinnew) and 'Address' (@domain.alt), an 'Unlock account' button, and various checkboxes for account settings like 'Account disabled', 'User must change password on next logon', etc. The 'Account expires' section shows 'Never' selected. At the bottom, there is an 'Edit' button and 'Apply'/'Cancel' buttons.

ОС ALT

<https://getalt.org/>

- Включает простые инструменты для использования групповых политик
- Берёт лучшие практики взаимодействия с пользователем

Спасибо!
